

Explore The Life (and Afterlife) of Batteries

Learning Intention

We are investigating how different types of batteries can become dangerous when misused or disposed of improperly by observing, collecting, and organizing evidence.

I know that I'm on track if I can...

- ❑ I can observe and record evidence from battery investigations.**
- ❑ I can identify patterns in when batteries become dangerous.**
- ❑ I can collect and organize data to use later.**

Thermal Runaway

Create a Nearpod for the Thermal Runaway Pathway

Students analyze:

- images of swollen batteries
- damaged phone batteries
- battery fires videos

They answer:

- What do you notice?
- What seems risky?
- What patterns are emerging?
